## Documentation Phase

First thing I do is to copy the Bootstrap link from the website and paste it in the VS code which is the IDE being used in this activity

```
1 <html lang="en">
2 <head>
3   <meta charset="UTF-8">
4   <meta name="viewport" content="width=device-width, initial-scale=1.0">
5   <link rel="stylesheet" href="style.css">
6   <link rel="stylesheet" href="media.css">
7
8   <link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/css/bootstrap.min.css" rel="stylesheet"
9   <script src="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/js/bootstrap.bundle.min.js" integrity="
10
11
12
13
14
15
16
17
18
19
20 <script src="https://cdn.jsdelivr.net/npm/@popperjs/core@2.11.8/dist/umd/popper.min.js"
    integrity="sha384-I7E8VVD/ismYTF4hNIPjVp/Zjvgyol6VFvRkX/vR+Vc4jQkC+hVqc2pM80Dewa9r"
    crossorigin="anonymous"></script>
```

I search upon the components section in the website and find a navigation bar with links provided. I copied it from the website and configure the rest using the HTML and CSS for designs. I have not particularly do any spectacular design but just created a Navbar in a simplest viewpoint.

```
<div class="header">
  <div class="container-fluid gx-0">
    <nav class="navbar navbar-expand-lg">
      <div class="container-fluid">
        <a class="navbar-brand logo text-uppercase" href="#">SuperShop</a>
        <button class="navbar-toggler" type="button" data-bs-toggle="collapse" data-bs-target="#navbarNav" aria-controls="navbarNav" aria-expanded="false" aria-label="Toggle navigation">
          <span class="navbar-toggler-icon"></span>
        </button>
        <div class="collapse navbar-collapse" id="navbarNav">
          <ul class="navbar-nav ms-auto">
            <li class="nav-item">
              <a class="nav-link" aria-current="page" href="#">Home</a>
            </li>
            <li class="nav-item">
              <a class="nav-link" href="#">About us</a>
            </li>
            <li class="nav-item">
              <a class="nav-link" href="#">Laptops</a>
            </li>
            <li class="nav-item">
              <a class="nav-link" href="#">Products</a>
            </li>
            <li class="nav-item">
              <a class="nav-link" href="#">Contacts</a>
            </li>
            <li class="nav-item">
              <a class="btn-navbar" href="#">Buy Now</a>
            </li>
          </ul>
        </div>
      </div>
    </nav>
  </div>
```

I then created a grid container for my main picture and the catchphrase beside it. It has a bunch of classes in between serving functions such as another container but this time it is a box-container.

```
<div class="grid-container">
  <div class="content-home">
    <div class="row content-home2">
      <div class="col-lg-8 col-md-5">
        <div class="box-container">
          
        </div>
      </div>
      <div class="col-lg-4 col-md-8">
        <div class="box-container2">
          <h1 class="home-heading">Better <span class="home-span">Quality</span> and Fast <span class="home-span">Performance</span></h1>
          <p class="para-home">Experience the shopping ease and high quality standards products of our website</p>
          <div class="btn-home">
            <a href="#" class="home-links">Buy Now</a>
            <a href="#" class="home-links btn-2">Explore</a>
          </div>
        </div>
      </div>
    </div>
  </div>
```

Another container was also use in creating an About Us statements featuring the website functionalities.

```
<div class="container">
  <div class="about-us-container">
    <div class="about-us">
      <div class="row">
        <div class="col-lg-6">
          <div class="content-about">
            <h3 class="heading-about">About Us</h3>
            <p class = "para-about">Your Ultimate Destination for Cutting-Edge Computing! At LaptopHub, we're dedicated to bringing you the latest in laptop technology, combining performance, style, and affordability. </p>
            <p class = "para-about">As passionate tech enthusiasts, we curate a diverse selection of laptops to cater to your unique needs. Our mission is simple: to make high-quality laptops accessible to everyone. </p>
            <a href="#" class = "link-about">Read More</a>
          </div>
        </div>
        <div class="col-lg-6">
          
        </div>
      </div>
    </div>
  </div>
</div>
```

The last one in this index is the a section which has a class product category featuring a bunch of laptops with their names and specifications. I only have done three cards. I used a components named CAROUSEL and CARDS for the pictures to have a container and for the container to have a next and previous functions. I only do three which is pretty sad I my part because I wanna do more.

```
<section class = "product-category">
  <h2 class = "heading-product">Product Category</h2>
  <div class="container-fluid">
    <div id="carouselExample" class="carousel slide">
      <div class="carousel-inner">
        <div class="carousel-item active">
          <div class="container">
            <div class="row">
              <div class="col-lg-4 col-md-6">
                <div class="card card-product">
                  
                  <div class="card-body">
                    <h5 class="card-title"><span class = "span-name">MSI GF63 THIN</span></h5>
                    <p class="card-text">Makes games and creations more captivating! Thin GF63 supports daily multi-tasking demands with up to the latest 12th Gen Intel® Core™ i7-12700H processor and new Intel® Arc™ A370M graphics. Now, let's play!</p>
                    <a href="#" class="btn-product-ctg">Read More...</a>
                  </div>
                </div>
              </div>
              <div class="col-lg-4 col-md-6">
                <div class="card card-product">
                  
                  <div class="card-body">
                    <h5 class="card-title"><span class = "span-name">STEALTH STUDIO 14VN</span></h5>
                    <p class="card-text">A combination of sharp appearance and excellent performance, the all-new Stealth 14 Studio A13V. One second you're working on your favorite...</p>
                  </div>
                </div>
              </div>
            </div>
          </div>
        </div>
      </div>
    </div>
  </div>
```

## CSS

The css in this is just basic adjustment such as fonts, widths, margins, paddings, colors and many more. I want to create multiple pages and link it to the main index but it does not happen because I have consumed my time trying to configure some errors and in the end didn't fully complete the task. I only created a max-width of 992 px in terms of flexibility.
